CRKD

Beta Test Questions: Review Against the System

Owner and Staff sections · Customer section not included · Checked against the current code on 3 November 2026

Each question was compared with what the system actually does. Most questions match. The ones marked **Reword** test a real feature but use names, colors or steps the system doesn't have, which could confuse testers or make a working feature look like it failed.

38	8	0
Aligned: the system does this as written	Reword: the system does it, but the wording or steps don't match	Gap: part of it isn't in the system yet

18 owner questions and 28 staff questions, not counting the open-ended ones.

Changes to make before testing

1. **Reword** Owner · Category 1, question 3
   The forecast shows a Fast/Moderate/Slow rating, not an up/down trend. Reword the question to ask about the rating.
2. **Reword** Owner · Category 3, question 3
   The system has no "OK" tag. Use the real tag names: In stock, Low stock, Out of stock.
3. **Reword** Owner · Category 4, question 3
   There's no low-stock alert, only the Low stock tag on Inventory. Reword, or add a low-stock alert before testing.
4. **Reword** Owner · Category 5, question 2
   The list of owner-only pages is wrong: there's no Analytics page, and Products and Exchanges are missing.
5. **Reword** Staff · Category 2, question 4
   There's no low-stock alert at the POS. Point the question at the Inventory tag, or add an alert.
6. **Reword** Staff · Category 3, question 3
   The POS links to the Dashboard, not to Inventory. Reword, or add an Inventory button to the POS.
7. **Reword** Staff · Category 3, question 4
   Low stock is yellow, not red, and there's no "OK" tag. Fix the names and colors.
8. **Reword** Staff · Category 5, question 2
   Same page-list fix as the owner question.

Owner

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
Category 1: Functional Suitability			
1	Can you add, edit, and archive products (name, price, category) without problems?	**Aligned**	The Products page (owner only) adds, edits, archives and restores products, including size, color, stock and photo.

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
2	Does the dashboard show the right sales and activity of your shop?	Aligned	The Dashboard shows a 7-day sales chart, units sold, today's revenue and the latest 10 Activity Log entries. The Activity Log covers logins, password changes, staff archiving, exchanges and imports, not individual sales.
3	Does the sales forecast show which products are going up or down in sales in a way that makes sense?	Reword	Forecasting shows each product's average daily sales, its low-stock threshold and a Fast, Moderate or Slow rating. It doesn't show an up or down trend; the bell notifications say when a threshold went up or down. **Suggested:** Does the Forecasting page rate each product as Fast, Moderate or Slow in a way that matches your sales?
Category 2: Performance			
1	Do the pages open fast enough for daily use?	Aligned	Opinion question; nothing to change.
2	Do the charts show up without waiting too long?	Aligned	The only chart is Product Sales by Day on the Dashboard. Forecasting is a table.
3	Does the stock count change right away after a sale?	Aligned	Stock goes down when the sale is saved, and open pages refresh by themselves through live updates.
Category 3: Usability			
1	Are the screens, buttons, and words easy to understand?	Aligned	Opinion question; nothing to change.
2	Can you use the system without much training?	Aligned	Opinion question; nothing to change.
3	Is it easy to see which items are OK or LOW STOCK?	Reword	The Inventory tags read In stock (green), Low stock (yellow) and Out of stock (red). There's no "OK" tag. **Suggested:** Is it easy to see which items are In stock, Low stock or Out of stock?
Category 4: Reliability			
1	Did the system work without crashing or freezing?	Aligned	Nothing to change.
2	Were your sales, stock, and activity records still correct after you refreshed the page or logged out and in again?	Aligned	Sales, stock and logs are kept in the database, not in the browser.
3	Did a LOW STOCK alert show when an item was running low?	Reword	There's no pop-up or notification for low stock. The item's tag on the Inventory page changes to Low stock. The bell only shows forecast changes. **Suggested:** Did the item's tag change to Low stock on the Inventory page when it was running low?
Category 5: Security			

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
1	Does the system ask for the correct username and password before you can enter?	Aligned	Nothing to change.
2	When logged in as Staff, are the Owner-only pages (Staff Management, Sales History, analytics, forecasting) blocked?	Reword	The owner-only pages are Products, Exchanges, Sales History, Staff Management and Forecasting. There's no Analytics page; for staff, the Dashboard hides the sales chart, revenue and Activity Log. **Suggested:** ...are the Owner-only pages (Products, Exchanges, Sales History, Staff Management, Forecasting) blocked?
3	Do you need the Master Recovery Key to reset the Owner password?	Aligned	"Forgot password?" on the login page asks for the owner username, the master recovery key and a new password.
Category 6: Overall Satisfaction			
1	Is this system better than your handwritten notes and chat apps for tracking sales and stock?	Aligned	Opinion question; nothing to change.
2	Does the system help you decide what to restock and when?	Aligned	Low-stock thresholds and the Fast/Moderate/Slow ratings come from the last 7 days of sales.
3	Are you happy with the system overall?	Aligned	Opinion question; nothing to change.

Staff

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
Category 1: Functional Suitability			
1	Can you log in with your staff username and password without problems?	Aligned	Nothing to change.
2	Can you find a product by typing its name or by choosing a category?	Aligned	The POS has a search box (name, category, size or color) and one button per category.
3	Can you add items to the cart and change or remove them before paying?	Aligned	The checkout panel has + and − buttons, and removing an item asks first. To change size or color, remove the item and add it again.
4	Can you finish a sale with Cash or GCash?	Aligned	Cash asks for the amount received and shows the change; GCash asks for the reference number.
5	Can you print a receipt after a sale?	Aligned	After payment, choose Print Receipt or No Receipt. The browser must allow pop-ups.
Category 2: Performance			
1	Do the pages open fast enough for your work?	Aligned	Opinion question; nothing to change.

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
2	Does the system finish a sale without making you wait too long?	Aligned	Nothing to change.
3	Does the stock count change right away after a sale?	Aligned	Stock goes down when the sale is saved, and open pages refresh by themselves.
4	Does the LOW STOCK alert show up quickly when an item is running low?	Reword	The POS only shows "Stock: N" or "Out of stock" and has no low-stock alert. Low stock shows as a tag on the Inventory page. **Suggested:** Does the Inventory page show the Low stock tag right after a sale?
Category 3: Usability			
1	Are the screens, buttons, and words easy to understand?	Aligned	Opinion question; nothing to change.
2	Can you use the system without much training?	Aligned	Opinion question; nothing to change.
3	Is it easy to switch between the POS page and the Inventory page?	Reword	There's no direct link. From the POS: profile menu, Switch to Dashboard, then Inventory in the sidebar. **Suggested:** Is it easy to switch between the POS and the Dashboard?
4	Is it easy to see which items are OK or LOW STOCK (green and red tags)?	Reword	Green is In stock, yellow is Low stock and red is Out of stock. **Suggested:** Is it easy to see which items are In stock, Low stock or Out of stock (green, yellow and red tags)?
5	Is the receipt easy to read?	Aligned	Nothing to change.
Category 4: Reliability			
1	Did the system work without crashing or freezing?	Aligned	Nothing to change.
2	Is the total amount correct, and is the change correct for Cash payments?	Aligned	The change updates as the amount is typed. If the amount is short it shows "Still due" and won't save the sale.
3	Was the stock count correct after a sale?	Aligned	Nothing to change.
4	Was the stock count the same after you cancelled an order?	Aligned	Cancel clears the checkout before payment, and stock only goes down when a sale is saved. A finished sale can't be cancelled, so testers should cancel before paying.
5	Were your sales still saved after you refreshed the page or logged out and in again?	Aligned	Nothing to change.
Category 5: Security			

#	QUESTION	STATUS	WHAT THE SYSTEM DOES
1	Does the system ask for your username and password before you can use it?	Aligned	Nothing to change.
2	Are the Owner-only pages (Staff Management, Sales History, analytics, forecasting) blocked for your staff account?	Reword	Same as the owner question: the owner-only pages are Products, Exchanges, Sales History, Staff Management and Forecasting. **Suggested:** ...(Products, Exchanges, Sales History, Staff Management, Forecasting) blocked for your staff account?
3	Does the system stop you from selling an item that is out of stock?	Aligned	Out-of-stock options can't be added, the quantity can't go above the stock, and the server rejects a sale if stock ran out.
4	Does the system ask “Are you sure?” before it cancels an order?	Aligned	Cancel asks "Are you sure you want to cancel?". Removing an item and completing a sale also ask first.
Category 6: Overall Satisfaction			
1	Is the system faster than writing sales by hand or using chat apps?	Aligned	Opinion question; nothing to change.
2	Is it easier to check stock in the system than to check the shelves by eye?	Aligned	Opinion question; nothing to change.
3	Do you feel confident using the system when the shop is busy?	Aligned	Opinion question; nothing to change.
4	Are you happy with the system overall?	Aligned	Opinion question; nothing to change.
5	Would you like to keep using this system at work?	Aligned	Opinion question; nothing to change.

Profile and open-ended questions

- **Owner and staff profile** (name, role, device): fine as written.
- **Open-ended questions for the owner and staff**: fine as written.
- **Customer profile, customer questions and the customer open-ended question**: not reviewed, as requested.

Features no question covers yet

These are in the system but no owner or staff question tests them. Add questions if you want feedback on them:

- **Exchanges**: swapping a single item for another size or color within 3 days of the sale.
- **Audit Logs**: searching and filtering past sales, and exporting or importing them as Excel files.
- **Staff Management**: creating staff accounts, changing a staff password, archiving and unarchiving.
- **Change Password** from the profile menu, and **Light/Dark mode**.
- **Live updates**: a sale on one computer showing up on another without refreshing.

Notes for the team

> Testers won't notice these, so the related questions will pass. They are still worth fixing before the final defense:

- **Owner-only pages are blocked by the browser only.** The server doesn't check the user's role, so someone who knows the API addresses could still read or change owner data (Security, question 2).
- **Passwords are stored as plain text, and the master recovery key is written in the source code.** Anyone who can see the code can reset the owner password. Move the key to a Railway variable and change it (Security, question 3).
- **A sale is saved in two steps**: first the stock goes down, then the sale is recorded. If the connection drops between the two, the stock goes down with no sale recorded (Reliability).

Prepared from the CRKD source code (POS, Inventory, Products, Dashboard, Forecasting, Staff Management and login).
